AWS Migration Hub (Migration Hub) provides a single place to discover existing servers, plan migrations, and track the status of each application migration.

8. What is a requirement for doing an agentless installation of the AWS Application Discovery Service Agent?

1 / 1 point

- ☒ Using VMware vCenter
- ☐ Using Lambda functions
- ☐ Using serverless servers on premises
- ☐ Using Amazon Elastic Compute Cloud (Amazon EC2) instances

☒ Correct  
The AWS Agentless Discovery Connector (Discovery Connector) is a VMware appliance that can collect information only about VMware virtual machines (VMs). You install the Discovery Connector as a VM in your VMware vCenter Server environment by using an Open Virtualization Archive (OVA) file.

9. Which networking service transfers large, ongoing amounts of data between a customer's data center and the cloud?

1 / 1 point

- ☒ AWS Direct Connect
- ☐ AWS Snowmobile
- ☐ Virtual private network (VPN)
- ☐ Internet gateway

☒ Correct  
AWS Direct Connect links a customer's internal network to an AWS Direct Connect location over a standard Ethernet fiber-optic cable. With this connection, you can create virtual interfaces directly to public AWS services or Amazon VPC, bypassing internet service providers in your network path.

10. What is a task that is performed by AWS Application Discovery Service?

1 / 1 point

- ☐ Launch replacement applications
- ☐ Expand the size of Amazon Simple Storage Service buckets
- ☒ Organize instances into application groups
- ☐ Remove unwanted resources

Correct

Server data is retained in the AWS Application Discovery Service, where it can be tagged and grouped into applications to help organize AWS migration planning.

11. What is a task that is performed by AWS Application Migration Service?

1 / 1 point

- ☒ Create test environments for an application
- ☐ Migrate databases to Amazon Relational Database Service (Amazon RDS)
